Intel in Texas

Innovating and Investing in Texas

We are uniquely Austin, 100% Intel – and we're committed to creating a better tomorrow for our community.

Innovating in Texas

Located in the capital city of Texas, Intel's Austin facility is a research and development center for more than 1,700 employees who innovate at the boundaries of technology to make amazing experiences possible for business and society, and for every person on Earth.

The Austin site is focused on supporting innovations in cloud computing, Internet of things, 5G connectivity, memory, and programmable solutions, which are key to transitioning Intel from a PC to a datacentric company.

Intel in the Community

Our success depends on the health of our local community. Intel hires from local schools and universities, invests in research and development, and buys from Texas-based businesses. We don't just work here – we live here too. We're raising our families here, volunteering in classrooms and at nonprofits, and serving in community leadership positions.

Sustainable by Design

Intel's long-standing commitment to environmental sustainability helps us responsibly manage our environmental footprint. From investing in on-site alternative energy, green buildings, and water conservation, to implementing circular waste management practices and partnering with nonprofits on water restoration projects in the community, a focus on the environment is a focus on our future.

Innovation for Everyone

In close collaboration with our employee volunteers, the Intel Foundation, and community partners, we are working to expand access to opportunity and empower the next generation of innovators. Supporting education and other important community priorities is vital to making Texas a vibrant

community for everyone to live and work.
